

TERMS OF USE – Manufacturing Big Data, Knowledge and Analytics (BDA) (the “Module”)

The code of the BDA is Open Source under the Apache 2.0 license, and this license fully applies and can be found with the source code of the BDA. Apache 2.0 is a very permissive license and broadly means that the software can be adapted however much is necessary, as long as the required notices are included. The following figure shows an overview of what this means:

Can	Cannot
<p>▼ Commercial Use </p> <p>Describes the ability to use the software for commercial purposes.</p>	<p>▼ Hold Liabe </p> <p>Describes the warranty and if the software/license owner can be charged for damages.</p>
<p>▼ Modify </p> <p>Describes the ability to modify the software and create derivatives.</p>	<p>▼ Use Trademark </p> <p>Describes the allowance of using contributors' names, trademarks or logos.</p>
<p>▼ Distribute </p> <p>Describes the ability to distribute original or modified (derivative) works.</p>	
<p>▼ Sublicense </p> <p>Describes the ability for you to grant/extend a license to the software.</p>	
<p>▼ Private Use </p> <p>Describes the ability to use/modify software freely without distributing it.</p>	
<p>▼ Use Patent Claims </p> <p>Describes the rights to practice patent claims of contributors to the code.</p>	
<p>▼ Place Warranty </p> <p>Describes the ability to place warranty on the software licensed.</p>	
	<p>Must</p> <p>▼ Include Copyright </p> <p>Describes whether the original copyright must be retained.</p>
	<p>▼ Include License </p> <p>Including the full text of license in modified software.</p>
	<p>▼ State Changes </p> <p>Stating significant changes made to software.</p>
	<p>▼ Include Notice </p> <p>If the library has a "NOTICE" file with attribution notes, you must include that NOTICE when you distribute. You may append to this NOTICE file.</p>

This document is the notice that always needs to be included with the source code as well as the Apache 2.0 license. If the software is modified then the functional and technical changes made must be explained in an additional document kept with the files of the source code.

New Versions

The initial work for the Module was undertaken within the CREMA research project and the initial source code is that as at the end of the project. CREMA Partner Information Catalyst for Enterprise Ltd (ICE – www.informationcatalyst.com) also owns and will maintain a separate commercial version not subject to the Apache 2.0 license conditions (dual license). ICE will also contribute to the Open Source edition.

Support – Research Projects

If this component is potentially useful in a research project, then in the event that there may be a need to have bugs fixed, new features realised and performance tuned, it is possible to do this directly but alternatively it is possible to get support from ICE either by including ICE into the research project and assigning work to ICE for the intended advancements or by taking ICE's expertise and consultancy. To find out more and get exact pricing options, please send a mail to info@informationcatalyst.com describing the opportunity.

Support – Commercial

If this component is needed in a commercial project, then in the event that there may be a need to have bugs fixed, new features realised and performance tuned, it is possible to do this directly but alternatively it is possible to get support from ICE by taking ICE's expertise and consultancy.

It is also possible to get a license for the commercial version, which might have more performance and features than the current Open Source code you see accompanied by this document. Buying a commercial license of the commercial version of the module is subject to ICE's terms and conditions. Similarly a SaaS-solution hosted by ICE is also commercially available - contact ICE to find out prices and conditions by sending us a mail to info@informationcatalyst.com describing your needs.
